

# NEONATAL CIRCUMCISION PRACTICE IN THE COMMUNITY SETTING

Dr. Jorge DeMaria, Associate Professor, McMaster University, Pediatric Urologist

The McMaster Pediatric Surgery Research Collaborative is conducting a follow up survey regarding the neonatal circumcision course that took place in October 2010. This information will be valuable in understanding the effectiveness of the workshop and determining what areas require improvement. All survey results will be collected by an independent Research Coordinator and will remain strictly confidential. De-identified, pooled results will be presented to Dr. DeMaria after the study is completed. Your participation would be greatly appreciated. It should take only 5 minutes to complete this survey.

**Research Coordinator:**

Julia Pemberton MSc (c)
