ERRATUM: KIDNEY STONES GUIDELINE

In the “UPDATE – Canadian Urological Association guideline: Evaluation and medical management of kidney stones,” (Citation: Bhojani N, Bjazevic J, Wallace B, et al. *Can Urol Assoc J* 2022;16(6):175-88. <http://dx.doi.org/10.5489/cuaj.7872>), there was an error on page 180. Under the subheading, “Oxalate,” the sentence, “As these conditions are often associated with diar-

rhea, typical laboratory findings include low urine volume and pH, hypocitraturia, **hypercalciuria** (unique to malabsorptive disease), and hyperoxaluria,” should have read as follows: “As these conditions are often associated with diarrhea, typical laboratory findings include low urine volume and pH, hypocitraturia, **hypocalciuria** (unique to malabsorptive disease), and hyperoxaluria.”

CUAJ regrets the oversight and apologizes for any inconvenience.
