## Erratum – Revised terminology and urethroplasty wait times

In the recently published “Establishing maximal wait times for urologic surgery in Canada in 2024” (Razvi H, Sitland T, Saad F. *Can Urol Assoc J* 2024;18:376-8), the word “optimal” has been replaced by “maximal” in several instances where appropriate in the text. Further, in Table 2, entitled “Wait times for urinary reconstruction and female incontinence treatments,” the wait times for urethroplasty have been revised to 24 weeks for elective and eight weeks for urinary retention.
