

APPENDIX

Supplementary Table 1. Correlation tests between clinical and pathological factors and response category[#]		
Variable	Pearson/Spearman's coefficient[*]	p
Age (years)	0.002	0.98
ISUP score	0.19	0.25
Pathological T stage	0.02	0.87
Positive margins	0.31	0.08
ICIQ-SF	0.68	<0.001
Time from surgery (months)	-0.21	0.23
Previous radiation	0.05	0.74

[#]In sequential order: low-dose full responders; intermediate-dose full responders; high-dose partial responders; high-dose failures. ^{*}Pearson correlation test for continuous variables; Spearman's correlation test for categorical variables. Bold indicates significance. ICIQ-SF: International Consultation on Incontinence Questionnaire-Short Form; ISUP: International Society of Urologic Pathology.
